TOOTH																
Mobility																

Three boxes per surface: read them as the tooth sits on this chart. The box nearer the midline is mesial.
Probing depth: gingival margin to the base of the pocket. Recession: margin to CEJ, positive when the margin sits apical to the CEJ, negative when it sits coronal. CAL = probing depth + recession. Bleeding: mark the site. Mobility: 0 to 3. Furcation: 1 to 3.
Universal numbers above, FDI below. Cross out missing teeth. This blank form holds no patient data until you fill it in.
