PIE Note Example: Fall Risk

FICTIONAL EXAMPLE. NOT A REAL PATIENT. FOR ILLUSTRATION ONLY.

PATIENT	DATE AND TIME
L. Moreno (fictional), 81	11/23/2026, 14:00
NURSE	**PROBLEM NUMBER**
Kai Brennan, RN	#2

P · PROBLEM

Risk for falls related to unsteady gait and a new diuretic. Scored high risk on the Morse Fall Scale at 08:00. Got out of bed alone twice overnight to use the bathroom.

I · INTERVENTION

08:15 bed in lowest position, wheels locked, bed alarm on. Nonslip socks on. Call light and urinal within reach. Taught the patient to call before getting up and asked her to repeat it back. Toileting offered every 2 hours while awake. Morning diuretic given at 09:00 as ordered.

E · EVALUATION

Called before each of three trips to the bathroom by 14:00. Walked with her walker and standby assist. No falls this shift. Repeated the call-first plan correctly. Continue the plan and reassess fall risk at shift change.
